LIMS TEAM:

Here is my response from FTR/PME. Philippe Renaud is the "Ray Adkins of PME R&D". It sounds like Labware LIMS there is "bigger than a breadbox". Does anyone have the handcarried documents mentioned here?

Bennie

Just a short addition to Philippe's note Bennie.
Our regional project to develop an integrated modular QA data management system was called GENESIS. This was completed in July 97 and continues a global roll-out, usually the entire system or pieces are referred to as Genesis. The September issue of the "PM Globe" has a review of the project on page 3.

After a call from Martin Goffman (18.9.97) I sent some information to him, handcarried via Cindy Boswell, with copies to Susan Laffoon and Jeff Sampson. This included our business case (1.1.96) and the package evaluations which led to LabWare LIMS as the Genesis core. Wolfgang Galka helped the project by undertaking the package search. I sincerely hope that since:
PMI is using LabWare as the core to Genesis in Europe, Asia & expected in Latin America and
Kraft use LabWare LIMS for their systems worldwide
that PMUSA R&D will join us for their systems.

Please let me know if you need more information, also we're ready to show you Genesis as either: standalone manual data entry mode or multi-user, multi-site, client/server, automatic mode.
As Philippe mentioned, a good Genesis site would be PM's affiliates in Czech, Turkey, Poland, Switzerland, or even my office.

We believe in Genesis and are ready to support you make a decision and of course, collaborate and share if you choose LabWare LIMS.
I look forward to hearing from you,
Regards, Lee.

Bennie,

Yes, Labware is in use in FTR the contact person there is Pierre-Andre Sester (PSESTER); the IS Manager is Ralph Bielser (RBIELSER).

IS R&D is not involved, however QA R&D is supporting the implementation of Labware in the new factories in Eastern Europe (the most advanced affiliate with Labware is Tabak in Czech Republic where the IS Manager is Gilbert Etter (GETTER)).

The contact in QA R&D is Lee Ryan (LRYAN).

Would you need any additional information please let me know.

I look forward to see you again,
best regards,
Philippe

PRENAUD - VCH0021A

Philippe,

R&D here is studying the acquisition of a new LIMS system. As you might know we have been using a home grown system running on Sybase since the early 90's.

The top two contenders at this point are Labware and Labsystems. We have heard that Labware is in use in Switzerland somewhere in PME/FTR facilities. Do you have any knowledge of such work? And who to contact about finding out more?

Thanks for your help,

Bennie

PS. Due to lack of time and energy, we have indefinitely postponed our plans to have an R&D computing synergy meeting.
